## — Interpersonal & Skills

Flexible, outgoing and an effective communicator. I'm a goal oriented knowledge seeker, and a passionate problem solver.

- Javascript
- ReactJS
- CSS 3 - SASS
- HTML 5
- Bootstrap 3 & 4
- NodeJS
- PHP
- jQuery
- SQL
- PostgreSQL

## — Recent Projects

- **The Community NPC Generator**
  * A React based personal project that generates a character for use in tabletop roleplaying games. The unique feature of the App is the ability for users to submit their own character names and traits to the database for others to use.
  * The projects front-end and back-end are both hosted on Heroku, I used PostgreSQL for the database and NodeJS for the server. User passwords are encrypted with bcrypt, and user image submissions are handled with the Cloudinary API which communicates moderation status, uploads, and deletions to the server.

- **Oakfield Photography**
  * Company website for a local photographer, built using vanilla Javascript with responive, mobile first CSS. The website is home to an introduction to the company and photographer, a portfolio of their work, and includes use of the Google Maps API for the studio location.
  * The image portfolio section connects to a NodeJS server hosted on Heroku, while delivery and updating of the portfolio images are managed through the Cloundinairy API.

- **Personal Portfolio Website**
  * Personal portfolio housing some of my web development projects, built with vanilla Javascript, CSS, and API's such as ParticlesJS. Website is hosted with github pages.

## — Education

- **Coleg Gwent**  – 2015 - 2016
  Access to Higher Education

- **Chepstow Comprehensive** – 2006 - 2009

## — Interests

* I love strategy and roleplaying games, and creating modifications for those games and their communities. I also enjoy reading all of the sci-fi I can get my hands on.
